## **CONTROL OF EICO EXTRACTORS**

**CYLINDRA 3271**

## **FOREWORD**

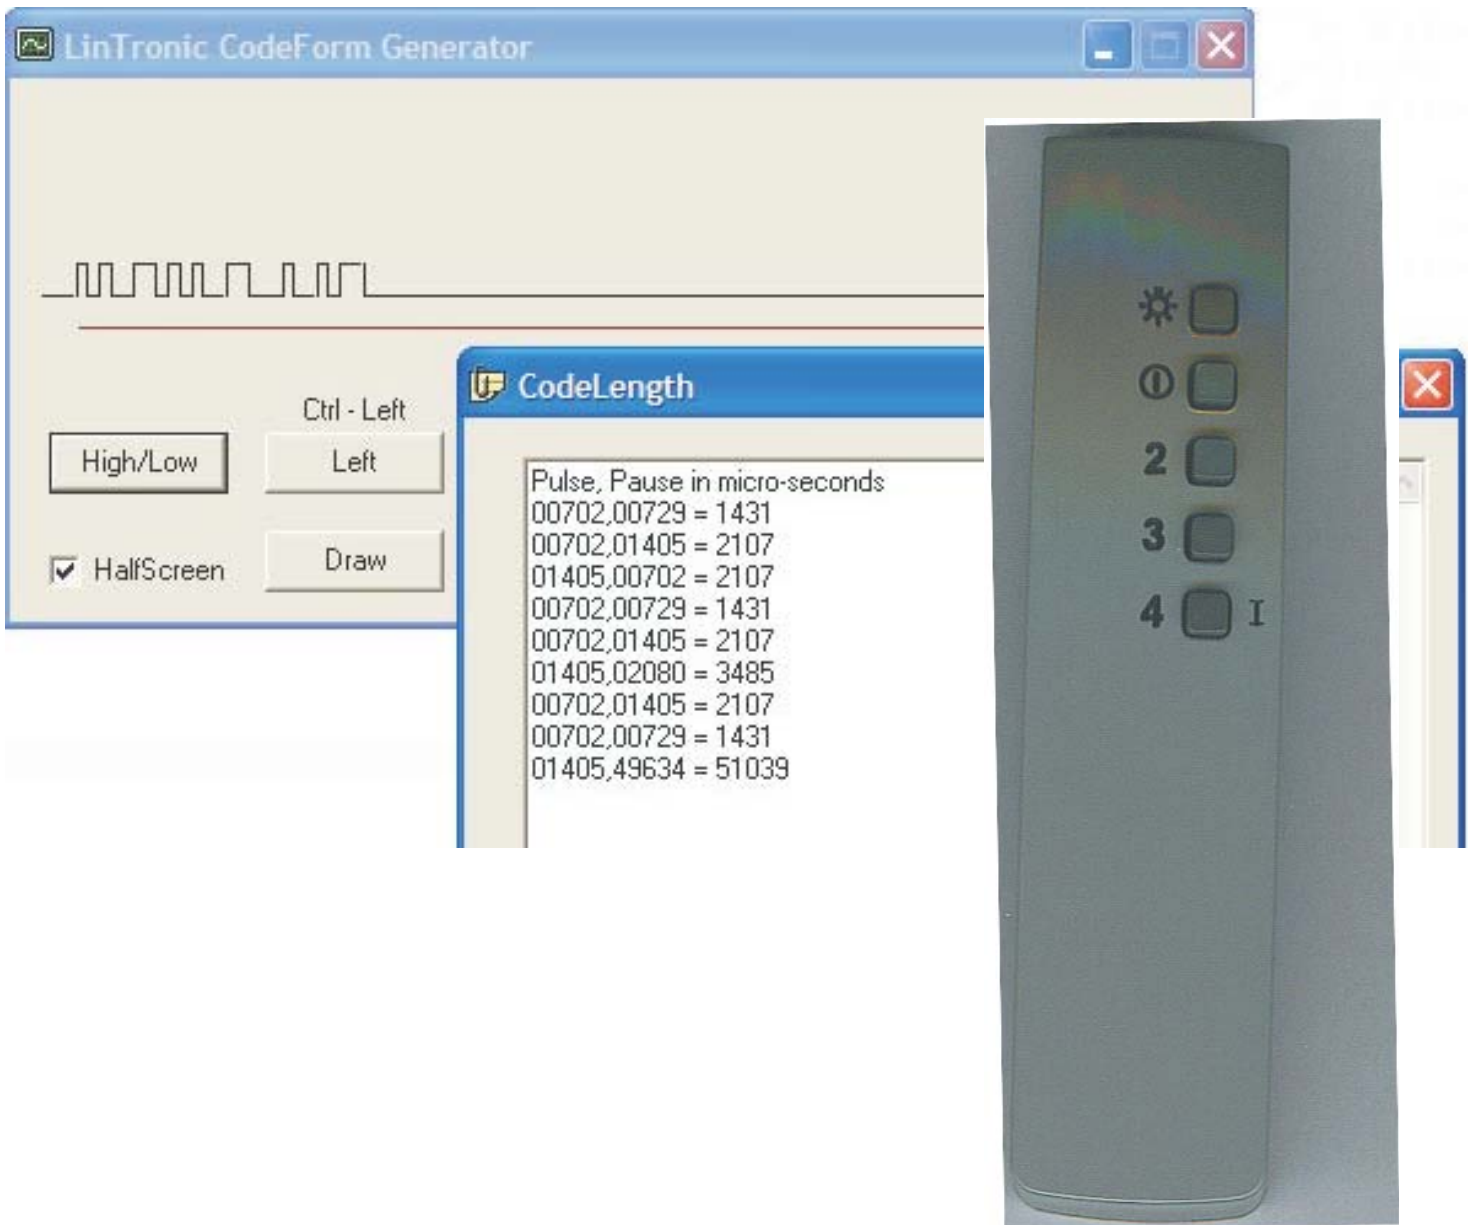

A customer wanted LinTronic to control his Eico extractor in a new/renovated kitchen, from a Bang&Olufsen BEO4 remote control.

Our TT455-RT-238 is capable of converting BEO4 signals into virtually anything.

By copying the infrared codes from the Eico remote control, we can convert B&O codes into Eico codes.

The Eico codes from the Eico remote control were copied and embedded into the firmware of the TT455-RT-238, allowing the installer to fully specify the functionality of the BEO4 remotem, and change if required.
