

USB/RS232

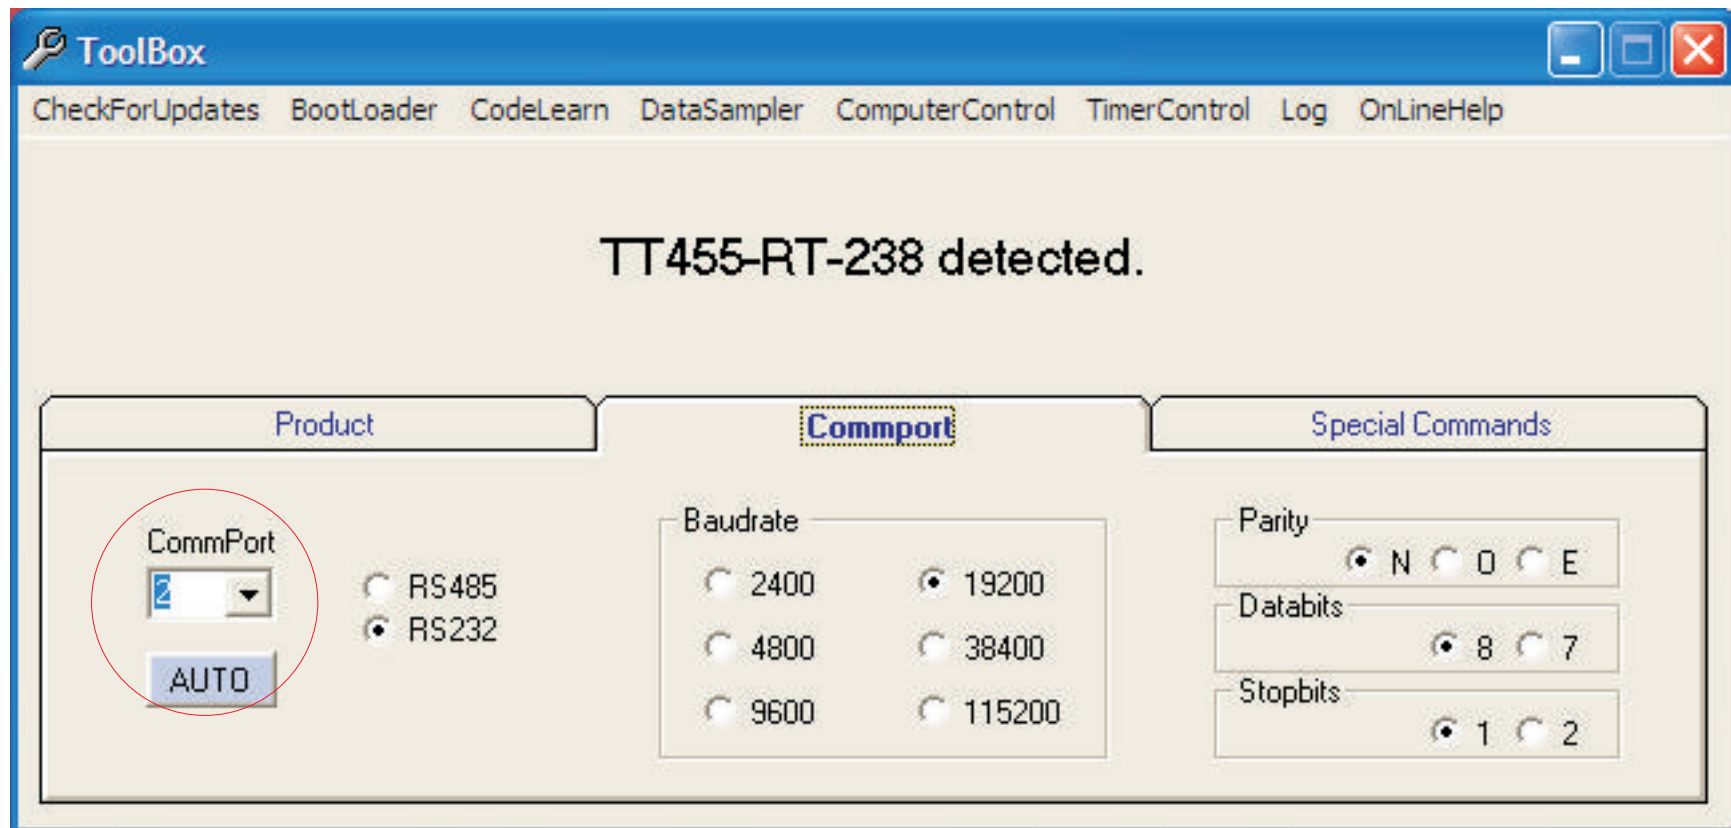

TT455-RT-238

Control music etc.

Make a note of the commport number communicating with your TT455-RT-238.
As MediaPortal only supports commport 1-8 we may have to change the current commport number.

Windows Firewall	Konfigurer Windows Firewall

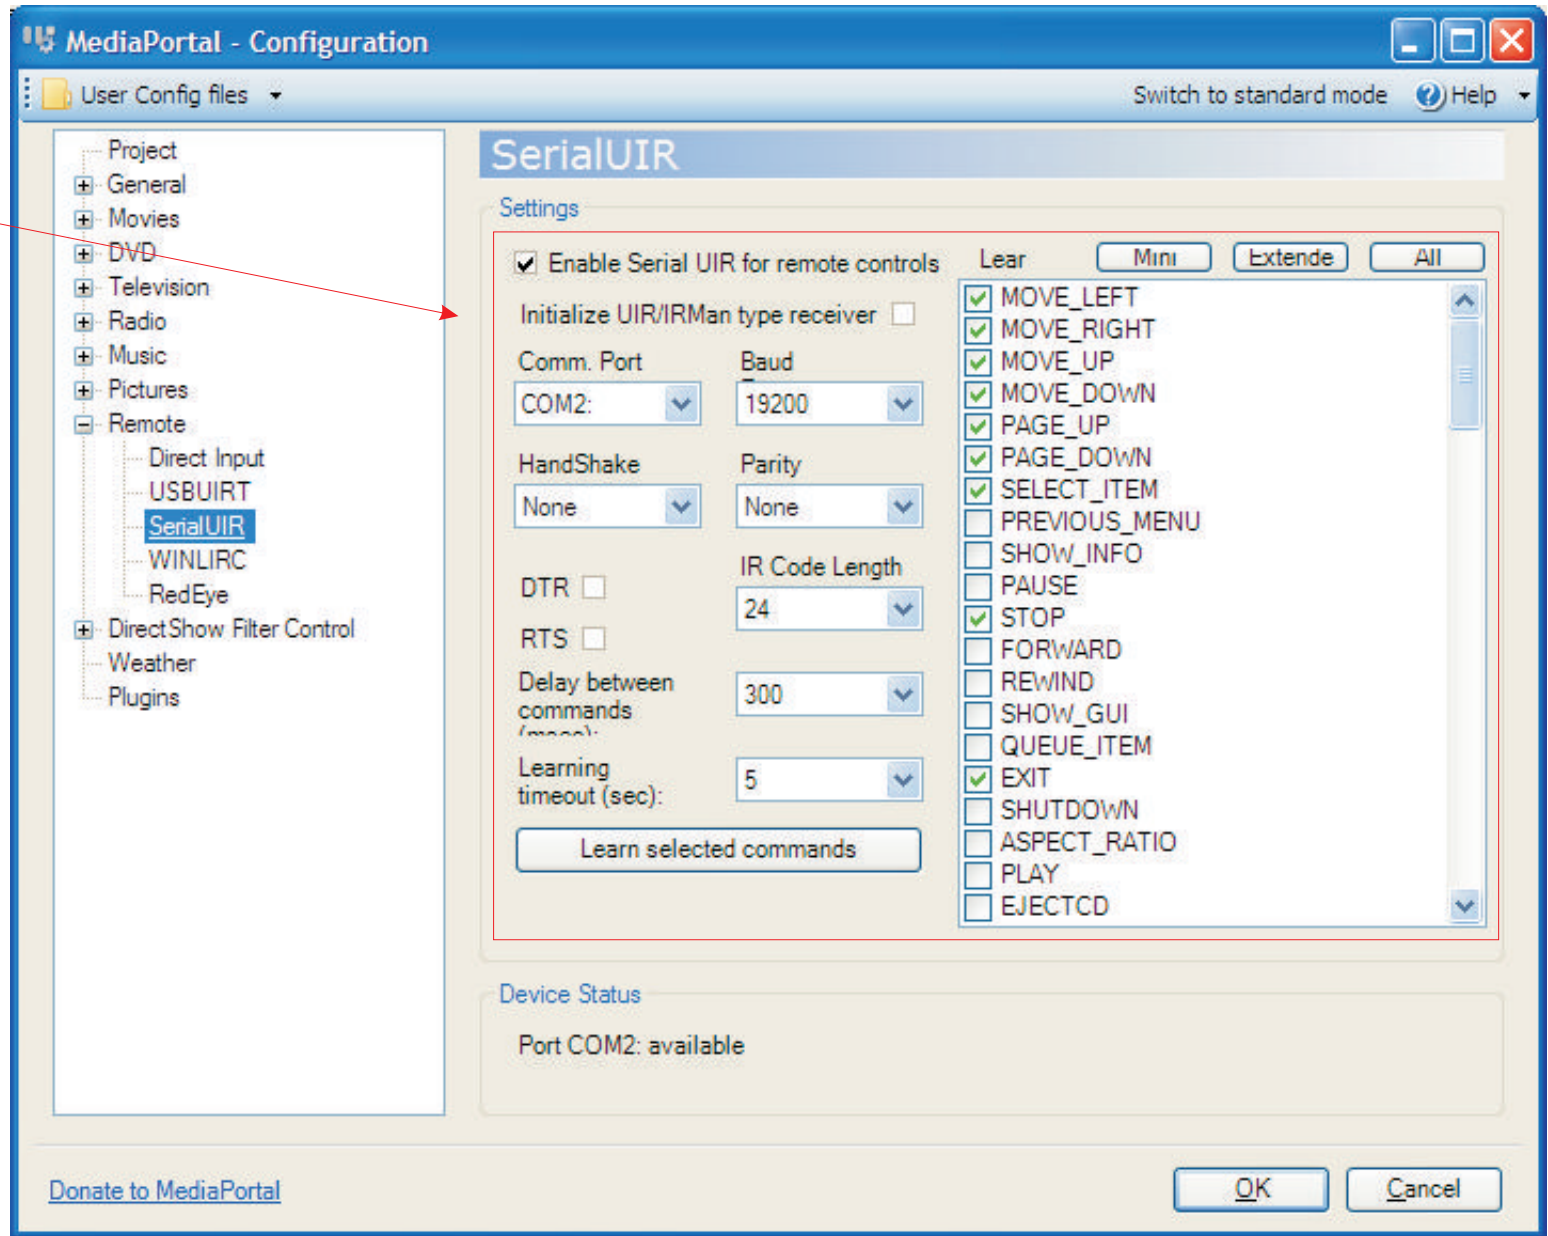

Select a free commport number lower than 9 and click OK.
If you do not have a free commport lower than 9 you cannot control MediaPortal by RS232.
Alternatively the -238 may simulate a Windows Window Center remote control.

Set these settings.

Bring the remote into for example CD mode.

Click LEARN and activate the remote to match/learn the listed commands.

You may have to activate the remote buttons more than once.

Click OK when done.

The screenshot shows the MediaPortal - Configuration window. The left sidebar shows a tree view with 'Remote' expanded to 'SerialUIR'. The main area is titled 'SerialUIR' and contains the following settings:

- Enable Serial UIR for remote controls
- Initialize UIR/IRMan type receiver
- Comm. Port: COM2
- Baud: 19200
- HandShake: None
- Parity: None
- DTR:
- IR Code Length: 24
- RTS:
- Delay between commands (msec): 300
- Learning timeout (sec): 5
-

On the right, there is a 'Lear' section with three buttons: 'Mini', 'Extende', and 'All'. Below these is a list of commands with checkboxes:

- MOVE_LEFT
- MOVE_RIGHT
- MOVE_UP
- MOVE_DOWN
- PAGE_UP
- PAGE_DOWN
- SELECT_ITEM
- PREVIOUS_MENU
- SHOW_INFO
- PAUSE
- STOP
- FORWARD
- REWIND
- SHOW_GUI
- QUEUE_ITEM
- EXIT
- SHUTDOWN
- ASPECT_RATIO
- PLAY
- EJECTCD

At the bottom, the 'Device Status' section shows 'Port COM2: available'. The window has 'OK' and 'Cancel' buttons at the bottom right.

You should now be ready to control the MediaPortal.
